Elbow 4" ID
15 degree

Kenco Pipe Castings can virtually eliminate wear in pneumatic conveyor hose elbows, commonly used in asphalt plant baghouses. They are cast of exclusive Kenco K-Chrome with a hardness of 550 Brinell. This alloy gives extremely long wear life in both wet and dry conditions. Elbows have a 50% thicker wall at the outer radius where most of the wear generally occurs. All elbow and straight pipe castings are made with slotted flanges that bolt together with 5/8" hex bolts.

cross section view of Kenco elbow casting showing 50% thicker wall at outer radius

Benefits:

- Kenco K-Chrome alloy provides exceptional wearlife
- elbows have 50% thicker wall at the outer radius where most wear occurs
- available in 4" and 6" i.d.
- easily combined to fit a required radius
- works in all applications - wet or dry, abrasive or corrosive
